

Regional Transnational Criminal Organizations Utilizing Drones with Explosives

The Yuma Sector Intelligence Unit recently received information that members of Los Salazar are utilizing drones to drop explosives on members of Los Pelones in an ongoing confrontation south of Sonoyta, MX. Other confrontations between these two organizations have occurred along the border, south of Wellton Stations area of operations, in recent months.

Agents are reminded to take any necessary precautions if drones are encountered or observed and report that activity up their chain of command as soon as possible.

Hypothetical Threat to US NatSec during Inaugural Proceedings

05 Jan, 2025

Laughing Cloud
ARM

Overview

Outlining the possible and hypothetical use of conventional and Military drones in an unconventional State Sponsored act of War within the United States.

Goals

1. Establishing a possible explanation for the overwhelming evidence dealing with 'mysterious' fog reports in the US and UK.
2. To lay out in detail the most likely possible threat to President Trump's life in an escalating pattern of unexplained attacks on US soil and obfuscations by Federal Law Enforcement agencies in relation to.

Specifications

Herein is only an analysis of available information and Intelligence through OSINT/HUMINT/SIGINT (limited) sources.

Milestones

I. First Attempted Assassination of President Donald Trump:

13 July, 2024 (After being forewarned in a hack of AI systems utilized and funded by the US Government) The first assassination attempt on President Donald Trump's life was carried out by a gunman identified through facial recognition as Maxwell Yaerick (A known ANTIFA agitator with training in Georgia under ANTIFA guidance)

This was later reported to be one Thomas Crooks. Through on the ground investigation and interviews conducted by LC and team, discovered several people in the community who knew the alleged assassin and refuted the FBI's affirmation that said individuals could do such a thing. Relating that his family was pro-Trump.

As well, gaining access to the grounds it was evident that the lapse in judgment that allowed the Assassin access to the roofline was deliberate in nature given the agency with jurisdiction. The initial forward security team in their assessment would have immediately identified such a position as a prime vector for any long rifleman of experience or even limited skill.

II. The Second Attempt on President Trump's life:

15 September, 2024. President Donald Trump survives another assassination attempt at Trump International Golf Club in West Palm Beach, Florida.

The attempted assassin was named quickly as Ryan Wesley Routh, armed with a modified SKS rifle chambered in 7.62x39 was able to get within 300 feet of the President, set up a hasty fighting position and fire several shots toward the President. At which point USSS returned fire and the SUB broke contact and was able to exfiltrate the scene, later being apprehended by Florida Highway Patrol and detained.

This attempt demonstrated that somewhere in the President's security detail or inner circle someone was leaking the President's location and time on scene. This logical assessment is easily understood when you look at the event through the lens of timing. Ryan Wesley Routh had enough time to set up position on a heavily monitored motorway and stage a vehicle, and within a few minutes had a clear line of sight to the President within 300 feet (Maxwell Yaerick/Thomas Crooks got within 420 feet)

Ryan Wesley Routh was later found to have experience fighting and recruiting in Ukraine. He had also visited Ft. Bragg, North Carolina over 100 times, the same Post that Master Sergeant Matthew Livelsburger, the 'alleged' Las Vegas Bomber (a sUAP operator) was stationed and served as well as Shammund-Din Jabbar, the New Orleans attacker.

Points of Interest:

- Thomas Matthew Crooks, Ryan Wesley Routh, Matthew Livelsburger and Shamud-din Jabbar **ALL** donated to Act Blue. A political fundraising Platform that primarily supports progressive and Democratic causes.
- The DNC and many prominent Democrats (the Biden family) have been proven to have extensive business and financial dealings with the Chinese Communist Party.
- Ryan Wesley Routh, Shamud-din Jabbar and Matthew Livelsburger all spent time at or on Ft. Bragg.
- Thomas Matthew Crooks was tracked via phone records visiting FBI HQ in Washington DC in the weeks leading up to the first assassination attempt.
- Both assassins chose firearms.
- Both New Year's Terror attacks used VBIEDs and showed signs of CCA.
- Both New Year's bombers either were seen crossing back into the US from Mexico or heading to Mexico (In the Livelsburger 'manifesto').
- 18 November, 2024 unusual Drone activity was seen in NJ, PA, OH, TX, CA, KS and over and around US Military installations.
- 22 Dec, 2024-1 January, 2025 AN unusual fog was seen across the UNited States and the UK. Many of these locations were also the site of reported drone sightings.
- China owns approximately 192,000 acres of land in the United States. This includes agricultural, Forest and other types of property.
- China has and is operating unofficial and illegal 'Police' Stations within the UNited States
- China has been shown through OSINT/HUMINT and leaked documents to be bringing in Drones into the US under the guise of Farm Equipment.
- Chinese discardables, cut roads and fresh tracks have been found within the Sonoran desert by the author of this paper and coordinated teams operating inside Mexico and across the border in support of Operation Lone Star.
- States reporting unusual fog: Texas, Wisconsin, Iowa, Maryland, Virginia, West Virginia, Nebraska, Kansas, Oklahoma, North Dakota, Florida and Minnesota
- Symptoms in Texas were reported as burning the eyes, mild cough, stomach aches and headaches.
- California reports indicated unusually heavy and strange fog containing an unusual smell. 'Chemical'
- Other reported symptoms include: Anemia, loss of appetite, Weight loss, Insomnia, Dry cough, Congestion, Irritability, Headache/Jaw pain, flu like symptoms, 'Weird' flu' w/ respiratory issues that devolves into Pneumonia, lethargy, fever of 101 degrees F, throat/esophageal burning, constriction and dryness, loss of voice.

- The smell within the fog has been described as 'Chemical', 'Pig manure farm', 'After firework smell', 'corrosive', 'toxic'
- Taste within the fog has been describe as 'Acrid' and 'toxic'

Hypothesis:

The above listed events are carried out by actors within the Democratic Party and the Chinese Communist Party to further advance Chinese strategic agendas and assassinate President Donald J. Trump in a possible drone swarm attack. The events of the last few months are all being linked and are used to probe US response and security to a new class of Drone developed by the Chinese Communist Party.

- (Herein, using OSINT/HUMINT/SIGINT I will propose an explanation for the events listed above and those we have discussed prior. This is not to say that I believe this narrative one hundred percent or at all. But what, within the strategic outlook and geopolitical situation, is the most likely avenue based upon my experience. As well as how I, myself, would carry out such an event if I was a State actor with interests to be served within the long term.)

Analysis:

Beginning 18 November, 2024 Citizens in the State of New Jersey began recording strange movements and air frames over their cities. It was later found to be drone activity which saw multiple Law Enforcement agencies launch aircraft to investigate the UAPs. In multiple reports the Officers responding reported that as they approached the air frames, their lights turned off and the drones 'vanished'. These drones persisted for a week and several credible videos had existed early on in the early days.

Within a week of credible videos surfacing, they were promptly buried by other videos from 'Concerned' citizens (Read Untrained reporters) flooding the internet with videos of everything from Civil Aircraft to Military traffic as well as AI generated images. These videos were then (By tracking algorithmic data and tracing accounts) dramatically upvoted to suppress the credible videos that could have been used to Identify the drones in question. This then clogged channels and verification efforts of Federal, State and Local Law Enforcement as well as Open Source Community and Private Contractors across the United States.

The accounts working to suppress these videos were and are Chinese bot farms, as a wealth of accounts simply lead back to a bot on further inspection. Many have anime characters or generic photos for profile pictures.

In conjunction with the events in New Jersey, Pennsylvania and Delaware. It appears the drones in question were conducting a probing action of US air Space, public response and defences. The drones in question appeared from the most credible image to come in the form of three distinct types:

- Triangular
- Quadcopter
- Hexa/Octocopters

While unable to corroborate, it is not beyond the realm of possibility to speculate these actions within CCP bot farms were to discredit the legitimate videos, bury them in a wealth of false information to discredit legitimate sightings and drive up the air of skepticism within the population in regards to the sightings. Add to this the wealth of reports from civilians of legitimate aircraft. Almost 80 percent of all reports were of legitimate air frames operating within the United States.

These sightings were further complicated by contradicting reports from Federal officials claiming they were not a threat to the US mainland but then deploying anti-drone EW apparatus and teams. As well as multiple leaked LE bulletins stating that the drones in question were operating on a frequency that could not be intercepted or heard on the US side. Meaning almost all known counter drone efforts would fail. And that these drones were operating for an extended period of time, well beyond normal civilian or commercial drones. Some within the five to six hour window of operations.

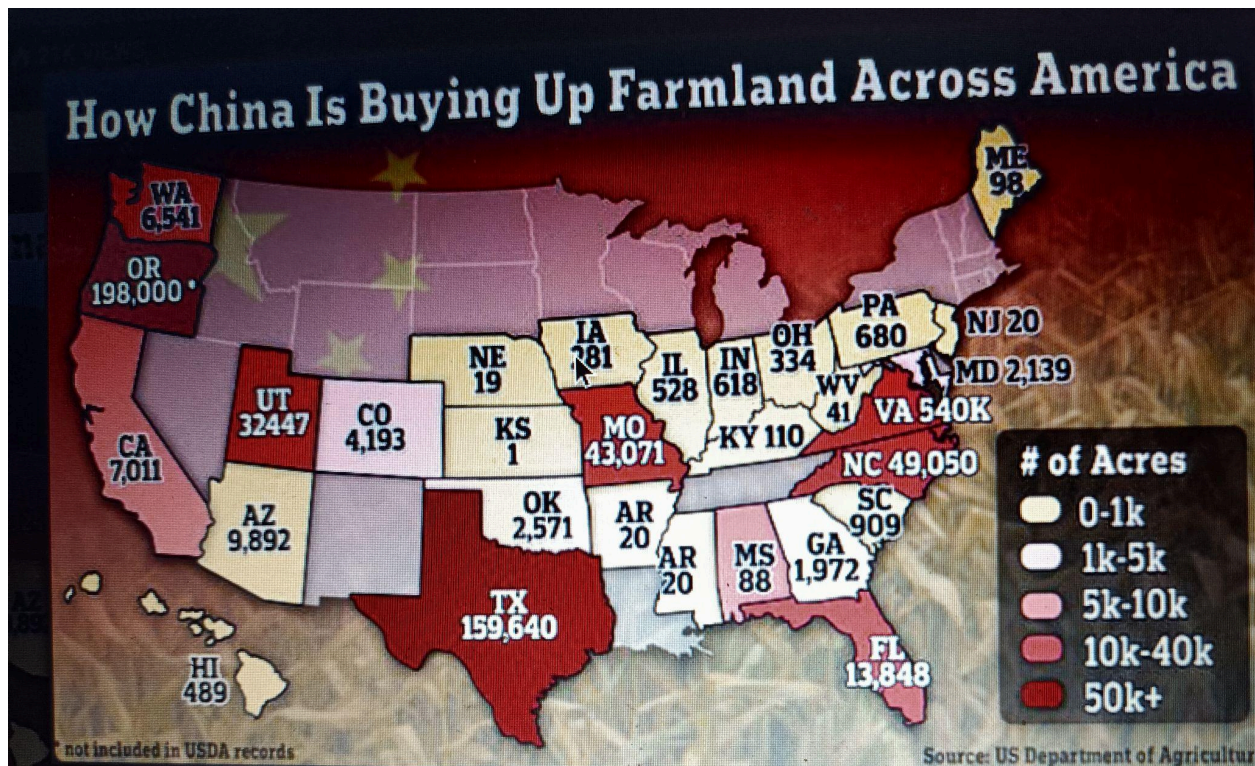

These Operations involving legitimate drone sightings and the wealth of public response in making it a 'Viral' story may also serve another purpose. By flooding the populace with upvoted videos of legitimate and AI produced videos, the public's collective memory becomes overwhelmed to the phenomena and then desensitized. This hype, as seen by the general public, is nothing more than a fad or passing fancy. Eventually burning out all those with the current tik tok attention span of 15 seconds or less.

Saturation, over stimulation and nothing 'going on' (Meaning no attacks, no threat posture, etc) leads the public to simply accept the drones now as a normal part of life. While for a majority of others, normalcy bias will take hold and they will see the stories and reports as nothing more than overblown hype.

This in and of itself, is a strategy and aspect of 5GW that can't be overlooked. By taking advantage of the American SocMed mentality and providing a fanciful distraction from reality. Promoting videos by the thousands to saturate and discredit the actual videos, effectively hijacking the algorithm and 'jamming' the feeds of millions, you have now opened yourself a window.

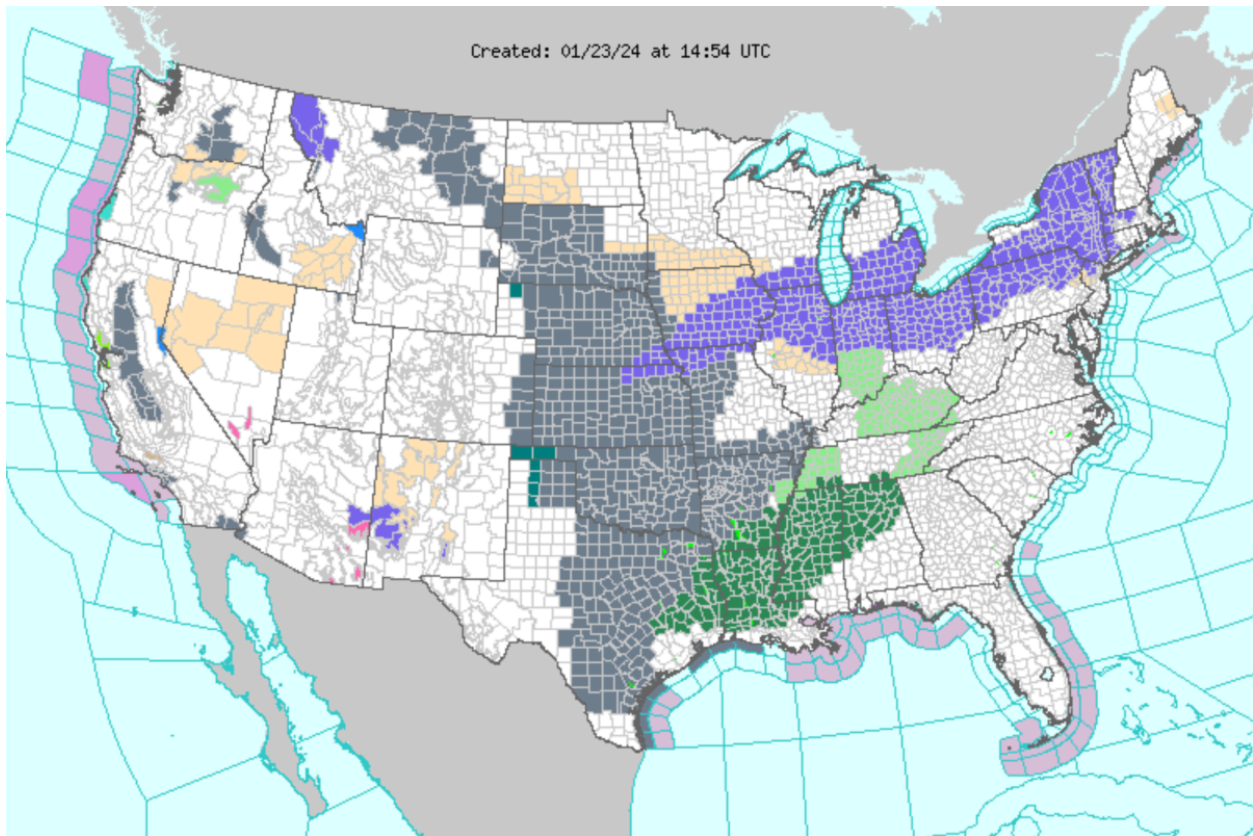

The average American will cease to look up, cataloging this as something non-threatening. A non-issue and even if they were proven now to be CCP aircraft, it will be treated much like the Spy balloons. Therefore eventually Americans will stop looking up or into it. Anyone who does, will now be ridiculed by the masses who have been over saturated with false claim videos of drones, that are obviously and hilariously a commercial aircraft and not a drone.

This leads us to a potential broader Chinese strategy. Let's look at the sheer amount of land owned by the Chinese Communist Party:

The above is a simple rudimentary map (simply for the purpose of this report)

Keeping the above in mind, let us now look at a Map of the United States under heavy fog, much of which was reported to be 'Strange', 'Weird', or have properties that appeared to be an oddity or outside the normal behaviour of local, known fog:

As we look at the above, if we were to overlay the fog map over Chinese acreage, we see almost a direct overlay of the area. Obviously this does not take into consideration or provide the depth needed to determine exact GeLoc of Chinese lands, however in the realm of drone warfare, we don't need it.

Drones being easily transportable and even the drones with flight times such as we have seen in videos and been reported. Area no longer matters. Especially if we consider that Russia has been operating the Poseidon nuclear capable sea drone that has the ability to circumnavigate the globe autonomously via satellite and GPS. We can not rule out that within the BRICS alliance and a shared desire to see the United States relegated to the dustbin of history, Russia wouldn't share this technology and that China and Russia can't fit it to their drones. Or scale down the engines for extended drone operations on smaller platforms.

(The above is speculation, but also not beyond the realm of logical progression of thought)

Given the correlation of the maps above (And I am not insinuating Correlation equals causation) we could postulate several things within the last ten years and implementation of 5GW and now active warfare:

- That the Chinese Communist Party initiated drone Operations earlier in November of 2024 to begin desensitizing the populace to the presence of drones in American skies.
- That the Chinese Communist Party waited for a naturally occurring weather phenomena and initiated Chemical/Biological attacks on the American homeland.
- The Chinese Communist Party (or active colluders within the United States Government) engaged in a Complex, Coordinated Chemical/Biological attack against the United States Homeland via Cloud Seeding and Smoke/Fog Operations to further drone release of Chemical/Biological agents within CONUS.
- (We do not rule out the attacks were carried out by the US Government itself, though not saying it was)
- Given recent history, we have irrefutable proof of members within the United States Government and Media being active in Chinese business and having funding from the Chinese Communist Party.

I will not delve into the aspects of cloud seeding (HAARP 'weather' control), or Military Smoke/Fog Operations (ref: Operation Sea Spray). Instead I will focus on the martial aspects of using the cover of Fog in a martial application, as if this was a natural occurrence given legitimate CLimate Change and an unusually warm fall/early winter and drastic shifts in temperature VS. water temps, and ground level temperatures.

Given the above maps, we could easily see how a dense fog would allow for Drone Operations at 200-300 feet given a drones capability to navigate by GPS and satellite. Using terrain avoidance sensors and topographical mapping. Given the list of symptoms, as wide and varied as they are and taking into factor the dispersal of an aerosol within cold and moist environmental effects, we can narrow down the most likely culprit:

Phosgene (COCl₂) or a similar Chemical in type. Why I have come to this conclusion is as follows:

- Most effective aerosolized agent with the longest hang time within a cold and densely foggy area.

- Most effective Biological or Chemical agent within a cold or heavily foggy area, that could be widely known and not easily traceable.
- Ease of aerosolization of chosen Biological or Chemical agents.
- Access and transport of said materials.

This leads us to Phosgene.

Phosgene's toxicity can be enhanced within foggy or humid conditions due to the aerosolized or gaseous properties as it is heavier than air and will tend to settle in low areas, close to the ground. Within fog and a humid environment, the presence of moisture will initiate the chemical decomposition of Phosgene into Hydrochloric acid and carbon dioxide.

Exposure to Phosgene and its subsequent sub chemical parts can cause eye irritation (we have seen those reports), dry coughs (we have those reports), burning throat or esophagus (we have those reports) foamy sputum (we have even seen that here with the sickness going around), Chest pain (we have those reports)

Phosgene can and is known to cause Pneumonia and respiratory infections when inhaled (these symptoms can be delayed by as much as forty eight ((48)) hours). Phosgene damages the respiratory system, burns the esophagus and can cause skin and eye irritation, leading to Acute Lung Injury (ACL), Bronchitis/flu like illness, and potentially Chemical Pneumonia.

This happens due to the interaction between phosgene with lung surfactants, leading to impairment of the epithelial-endothelial barrier and resulting changes from such in the operation of lung mechanics.

Mild symptoms appear initially such as coughing, chest tightness, wheezing, a feeling of the throat closing or tightness within (symptoms can be exacerbated by lying flat. PT should be elevated at a 30-35 degree angle) and can then progress onto severe conditions like Pulmonary edema and Acute Respiratory Distress Syndrome (ARDS, just like Covid did), Reactive Airway Distress Syndrome (RADS or CHEMICAL Asthma), emphysema.

Every symptom that has been described, including the taste and smell aspects can and does match with Phosgene or a related Chemical with similar properties as Phosgene. This is coupled with reports from others sick with similar symptoms now since the first of the year (and backtracking 48 hours) who are failing to shake their illness. Some even treating with Augmentin and still fail to eliminate their 'Sickness' several now on a Z pack and steroidal.

This would be an accepted treatment for a Chemical like Phosgene. The antibiotic is more to prevent secondary infections and add ons, while a steroid to help the lungs in healing.

As well, in fog, Phosgene can spread in its gaseous form widely and persist longer, being harder to detect due to its colourless nature and mild odor, which can smell like fresh cut hay, grass or have a pungent, acrid taste 'toxic' taste if you will (that not everyone can smell). The delivery of Phosgene (or a corresponding Chemical agent is ideal for aerosolized delivery and requires precise knowledge of aerodynamics and fluid dynamics. The agent must be dispersed within the boundary layer (60-90 meters/200-300 feet)

Now, please reference those maps once more and conduct a mental overlay. Then let us compare those areas with the reports and videos we are getting and ease of transportation or range of Martial drones or altered commercial drones. A radius from these areas gives us all the information we will need.

While we have confirmed Intelligence even as recently as today, that China is operating 'Police' Stations within CONUS and buying up massive farm lands. We also have credible Intelligence that they are shipping weapons and equipment under guise of farm equipment.

This does not mean drones. It would be far more expensive to build, ship and then reassemble said drones in the United States than simply buying and retrofitting agricultural drones for their purpose.

This is where I accuse the Chinese Communist Party of buying Commercial Agricultural drones like the Agri T30 and retrofitting them for Chemical or Biological dispersal.

Agri T30 Agricultural drone capable of being fitted with an 8 gallon tank and can cover 40 acres per hour. It features standard obstacle avoidance, terrain following capabilities and a range of 3.1 miles (though capable of much farther with modifications with Military parts/technology) It's maximum range standard is 6.5 miles with a max speed of 10 m/s or 22 MPH and dispersal speed of 7 m/s or 15.66 MPH. Its standard Hover time is about 20 minutes at 36.5 Kg or 80.7 lbs.

(This drone already is a perfect Chemical or Biological release vector without modification)

If we want to simply disperse liquid Phosgene as an aerosol, not much more is needed with the above drone. If however we wish to deploy liquid Phosgene as a gas, we could easily intercept the feed lines from the tank and implement a heating element and storage tank like a vape pen would utilize and then simply run the liquid through the insulated heating element and disperse Phosgene as a gas.

The same can be done with the above drone as well. Under heavy fog these UAVs would be virtually invisible and go unnoticed or unrecorded.

This cover of a natural phenomena would allow operators to implement a surprise Biological or Chemical attack. Widely dispersing the gas or as a trial run for a future Operation.

As well, the purchase and retrofitting of Commercial Agricultural drones would allow CCP actors to avoid scrutiny from Customs by simply engaging in normal farming and conducting retrofits at their controlled facilities here in the US.

The above drones as well, would not cause immediate alarm or concern as they are commonly seen on farms and within Agricultural or CONservation operations. Even Scientific research and would certainly pose an issue for investigators as they would then have to identify who's drone, who bought it and where did it originate from.

Not all Liquids are the same and weight varies per density, which would require a modification to the drone or a loading of storage tanks that kept the drones within Operational parameters for unaltered drones.

For example, Phosgene's specific density is approximately 1.47 grams per millimeter.

We know this requires a simple mathematical formula: $\text{Mass} = \text{Volume} \times \text{Density}$

Which means loading an eight gallon tank on an Agri T30 puts our weight at 98.11 (outside the operational weight limit of 36.7 kg or roughly 80 lbs).

With these facts, if I am trying to achieve a logical and rational possible explanation, I can only come to one singular conclusion. A chemical attack. Whether perpetrated by the CCP, our own Government or most likely a Collaborative, Complex and Coordinated Attack C+CCA.

To combat this scenario, I took into effect the above research and knowledge I have via prior Operational experience, training and service within the Ukraine CONflict (training Subsistence and guerilla Operations, blending Civil and martial training.) And then Operating as the enemy to attack America, though I must say, SEA and China is not my AO nor my speciality. However much like Taqiyya, I do understand the Art of War and have read it and studied it in depth as well as Eastern Philosophy. Which still has a tight grip over Chinese Military Doctrine and thinking. Temper this with an old Chinese proverb: Secrecy is Worth ten thousand tigers.

Therefore I propose a multi phasic attack has possibly occurred:

Phase One: Conducting visible and highly public displays of Chinese drone capability over populated areas, using highly visible lights to attract public views. This strategy will introduce a cascade of questions and a response by the US Government. However with Chinese technological advances being beyond the US by at least ten years, we would begin to see the US Government as ineffectual and unable to protect the mainland.

Eventually bringing about the revelations we already know. The drones are operating within an unknown frequency, rendering our EW and counter drone tech useless. Which suggests Quantum Communication or Multiphasic communications within the quantum spectrum (both theoretical areas I am familiar with as I have written several theories myself on Pulse Wave Vibrational Theory and Subatomic attenuation, which also has applications for 'Gravitic drives'.

Phase Two: As the drones go 'viral' in the public, paid influencers begin to make AI produced videos and begin floating conspiracy theories of UFOs and inline with the 'Conspiracy' of Project Blue Beam which then draws in the most fringe elements of Schizo-effective theorists and also isolates and pushes away critical thinking Americans and forces them to label this as a cooked up theory.

Videos showing obvious commercial aircraft get upvoted by Bot farms and begin to make this all look like a hoax, causing and sewing division and burying the legitimate videos.

This also makes it harder for OSINT, Federal, Local and State LE to provide an explanation to the populace. The confusion and gaslighting being all part of the overall Strategy.

A tertiary action within this, is that the drones have not done any harm and therefore will be seen as an oddity, something to break the tedium and horror of our everyday lives and reality. They become normalized and thus offered a free range of operation. (Keep in mind the geographic location of these drones as well along the Eastern Seaboard)

Phase Three: Whether a man made fog or natural occurrence, it was the opportunity which was needed to conduct trial releases for a future Operation. All beginning itself in stages.

- Stage one: release of Chinese Smart Dust to track the dispersal area, toxicity, impact on environment and physical health outcomes on Americas.
- Stage two: Chemical release of agent
- Stage three: SocMed exposure (induce fear and confusion)
- Stage four: Data collection, observation and processing into actionable Intelligence for a future operation.

Phase Four: Preparation for attack. In my hypothesis and analysis. I would expect to see movement or isolation of major Chinese players from Washington D.C. and the mainland in preparation for a massive attack Using a WMD. As well as unusually low levels of operation at Chinese farms.

I also expect those within the US Government with ties to China to vacate DC and not attend the inauguration.

The ultimate threat I can foresee is a Chinese Communist Party attack on President Donald J Trump during the Inauguration.

I suspect this for the following:

- During the hacks of AI platforms last year, it was discovered that there was a Plot to assassinate former President Trump if incarceration and assassination from inside failed. These plots were to come during the campaign or during Inauguration. The first attempt failed and the second. President Trump has now been elected.
- President Trump's election now threatens the globalist and Government agenda that had been in place for years beginning truly under the Obama administration.
- China, having the most vested interest, having several key members of congress, Intelligence subcommittees and businessmen and lobbyists, can not afford to see their agenda interrupted. Standing to see billions in losses and a disruption to the end game. (WEF 2030)
- China has the resources, foothold and manpower and influence (with or without collusion from the US Government, to conduct such an operation.
- Iran, while a regional power, does not have the capability or wherewithal to conduct such a large scale operation globally.
- China has been and is, a major rival of the United States seeking to gain Sole superpower status.
- Both assassination attempts having failed, and laughably so the lies that followed, have exposed the US Government as being complicit, therefore the US Government can not afford now, to be ID'd in another successful attempt. Therefore, China can step in to conduct PoliStab (Political Stabilization Operations) to ensure the continued status quo.

Phase Five: Assassination. It has been my affirmation since the second failed attempt there would be an attempt on President Trump's life again. I had initially postulated the vector would be via explosives and targeting the Presidential motorcade (which is still possible within this scenario)

This phase would use drones and as I played it out and sand tabled it, the most likely attack would come in waves and involve drones and explosives as well as Chemical attacks as a follow on.

The actors, operating under Chinese authority, would wait for the ceremony to get under way and for the President's cabinet/team to take their seats. As well as those in attendance. From there, it is simple mathematics and I propose this is how the attack would take place:

Drones containing explosive charges or a Hyperbolic formula would be launched from:

- Fort Circle Park- Distance from Capitol approx: 5.2 km/3.23 miles, Flight time @ 22 MPH = 8.8 minutes Time to Target
- Roosevelt Park- Distance from Capitol approx: 4.76 km/2.96 miles, Flight time @ 22 mph=8 minutes Time to Target
- Virginia Border - Distance from Capitol approx. 5.24 Km/3.26 miles, Flight Time @ 22 mph= 8 minutes and 15 seconds Time to Target
- Colmar Manor Community Park- Distance from Capitol approx: 6.75 Km/4.2 miles, Flight Time= 11.46 Minutes Time to Target

(These drones would be packed with High Explosives and used to target not just the President and Vice President, but the entire cabinet, members of the Joint Chiefs, Speaker of the House, Congress and the Senate in attendance. Largely all Republican. Thus decapitating the new incoming government)

- Oxen Cove Park- Distance from Capitol approx: 9.26 km/5.75 miles, Flight Time @ 22MPH = 15.68 minutes Time to Target
- Bladensburg waterfront park- Distance to Capitol approx: 7.76 miles, Flight Time@ 22 mph = 13.14 minutes Time to Target
- Fort Mahan park- Distance from Capitol approx: 8.92 km/5.54 miles, Flight Time @ 22 mph =15.12 minutes

- Rock Creek Park- Distance from Capitol approx: 9.33 km/5.8 miles, Flight Time @ 22 mph= 15.63 minutes

(These drones could/would be loaded with a Chemical agent like Phosgene to target any possible survivors, maximize civilian casualties further complicating the situation, rescue efforts and security response. As well as preventing first responders from rapid response to the now dead, dying and wounded Government members)

- Bethesda, Maryland- Distance to Capitol approx: 12.88 km/8 miles, Flight Time @ 22 mph = 21.86 minutes Time to Target
- Potomac launch (3.33 miles South of National Harbour)- Distance to Capitol approx: 16.54 km/10.54 miles, Flight Time @ 22 mph=28 Minutes Time to Target
- Walker mill Regional Park: Distance from Capitol approx: 11.61 km/7.21 miles, Flight Time @ 22 mph = 21.16 minutes Time to Target.

(These drones would be loaded with either secondary explosives to catch response workers or Chemical irritants and crowd dispersal weapons like CS to further deny the area to first responders and ensure a truly MasCas and CivCas incident.)

- Tingham, Island, Chesapeake Bay- Distance to Capitol approx: 56.13 km/ 34.87 miles, Flight Time @ 22 mph= 95 minutes 13 seconds Time to Target.

(This/These drones launched from a Chinese UUV or XLUUV would carry no payload and only serve as a means of distraction and diversion for the incoming swarm and possibly have radar cross sections of a larger aircraft to promote Air Force diversion of resources from the Capitol to intercept these drones.)

The launch of these drones would be coordinated and on a tight flight schedule and attack timeline. We see the earliest arrival being from just under three miles out to eight miles out for active payloads and the farthest at twenty eight minutes out with active payloads.

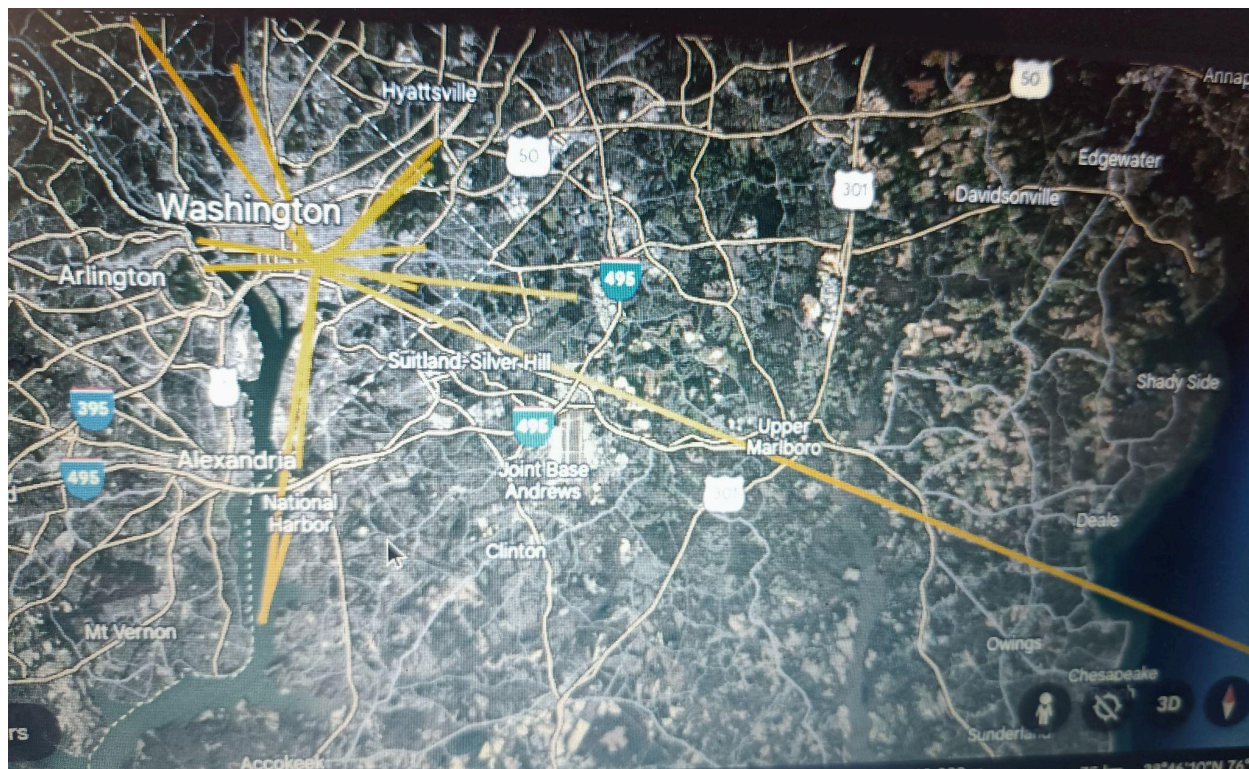

By the time the first wave is striking, between 8-11 minutes have passed.

The second wave will arrive within the next three to five minutes to deliver Chemical agent.

The third wave will then arrive within the next six to thirteen minutes and catch responding personnel in secondary blasts.

The launch from the Tingham Island area would be used to muddy the waters and draw away US Air Force fighter over watch to chase down possible threats. These would be decoys, though using Air Force Fighter cover to intercept low flying drones in a heavily populated area is out of the question. It is the Air Frames radar array and targeting systems (especially the F22 and F35 lightning II we want out of the area as much as possible)

(The locations for launch were chosen by me after careful deliberation of tactics, strategy and location in conjunction with possible ease of deployment and proximity to the intended target. It is the most likely launch sites and sites I myself would choose if my intended target was President Trump and the decapitation of the US Government. This also does not limit or exclude the possible reaction of ushering President Trump to a secure location and then his motorcade being targeted with drones and/or Iranian or Chinese made anti-armour or MANPADs. This entire Operation could easily come in under 1 million dollars given the cost of commercial drones and retrofitting and simple ease of transport.)

Motive:

As explained, China stands to lose much from a Trump Presidency. From threatened Tariffs which now puts a damper on BRICS ambitions to replace the US Dollar as the global reserve currency, as well as Chinese global ambitions within the framework of WEF referendums and guidelines. The push to a singular world, one world governmental control. As well as the destabilization of the United States, NatSec and the American ability to respond to global conflicts and China's ambition to invade Taiwan or bring them back into the fold.

A Trump Presidency also begins the limitation of Chinese influence and control of American Politicians within the US Government.

Means:

China as a Nation has seen a rapid development in their military capability and Martial ambitions within the South China Sea.

China's activity and hand within the war in Ukraine has helped shape the future of modern warfare in a way that the advent of Gunpowder ushered in the Napoleonic era of warfare and the Blitzkrieg established the doctrine of Combined Arms Operations.

The experience within Ukraine has placed warfare back in the hands of the individual and showed the weaknesses within the West and their martial thinking. Exposing the US to unrestricted warfare via the implementation of Commercial and martial power in the form of a new type of Guerilla warfare. China is also aware of the current American political zeitgeist and history, being able to flood the United States with Chinese Nationals and fighters and being able to avoid suspicion for fear of racism, xenophobia and multiculturalism.

These factors lead to an unrestricted ease of movement and little fear of involvement from LE for fear of accusations of abuse and racism. As well, Asians they believe are notoriously hard to identify to Westerners (As in National Origin) and are largely accepted and seen as 'White' or 'White passing' for the woke.

These factors and more, lead China to the ease of means in conducting this Operation. As they have the Socio-political advantage, the money, the land, the means to conduct covert operations within hostile and friendly nations and the means to project their power globally.

Opportunity:

The opportunity is now.

With the sheer division, disarray and Political destabilization going on internally. The United States has never been more vulnerable. The stage has been set with two failed assassination attempts, two terror bombings pointing fingers at China and World War III primed for delivery.

The US Government has set up Iran as the enemy, when in reality, Iran doesn't have the force projection for such a detailed operation or even a subtle one.

China could strike and in decapitating the incoming Presidency and cabinet, as well as current Republican leadership, this would cause a State of Emergency to be declared and as well a State of War. This then would allow the Democratic regime in DC to hold power under war times powers and acts, seeing as there is no government to take over and in war, a stable one is needed to direct the nation and secure its ConFor and NucFor.

Thus the Biden Regime remains, letting Biden step down and Harris is the President who is able to select a cabinet from among the survivors. Thus, allowing CHina to keep its influence and the Dems their power, as snap elections will be needed to replace the missing Congressman and Senators.

And the US Republic dies.

Conclusion:

With the Intelligence I have at hand. OSINT/HUMINT/SIGINT and RUMINT, as well as my own personal experience tracking down roads and Chinese discardables in the Sonoran Desert and other endeavors. This is the likely conclusion I have come to.

That there is an active and clear threat to President Trump's life using Drones as the delivery vector for a multiphasic strike.

This is my analysis of the current Intelligence at hand. It does not mean that I feel this is going to happen, but more how I would conduct such an Operation should I be a CCP officer or the State and processing the information and events that have occurred these last few months.

Regardless of my own personal analysis, it would be my recommendation as the initial analyst to uncover the plots in Feb 2024, watching them come to fruition and my own work in Butler hours after the assassination. That President Trump strongly consider the following:

- Select a secure and hardened location for the Inaugural Ceremony (acting as if we are already at War and within Continuity of Government Operations) and inform only a few select within his security details to know this location.
- On the day of the Inauguration multiple routes are chosen for several caravans acting as decoys. That no single person knows which convoy holds the President or his administration.
- That the President and his Administration (Vice President J.D. Vance, then go to different locations for the swearing in ceremony and deliver the Presidential address via twitter or other SocMedia medium.
- Afterward, at the President's convenience take control of the White House.

All of this may seem over blown, but within the realm of our current state of affairs and geopolitical issues, these are not normal times. Nor are they safe times, the above postulation of a possible Assassination or decapitation strike shouldn't seem far fetched, as with 750,000 dollars, I myself could execute it with minimal effort.
